

About

Pedestrian Safety

Many people in Austin are worried about safety in certain areas of the city. Some places feel isolated or poorly lit, especially at night, which can make walking there uncomfortable. News about break-ins, thefts, and other incidents can increase these concerns and make residents feel less secure. Because of this, many people are more careful about where they go and when they travel.

Additionally, around 100 pedestrians are killed or seriously injured on Austin roadways each year despite the efforts of Austin's Vision Zero plan (Austin City Auditor's Office). This app would help reduce the risk for pedestrians and the frequency of dangerous crashes

Lack of Outdoor Activity

Since COVID and with the rise of more a technology-focused lifestyle, many Austinites have been spending less time outside in their area. This app would motivate them to get out of the house and enjoy the natural resources of the city, improving physical and mental health as well as promoting more community connection. In general, it would lead to long-term wellbeing benefits that complement the safety improvements as a result of this kind of app.

Problems

Solution: SafeWalkers

SafeWalkers will help Austinites find safe and engaging routes to their destination by analyzing traffic, crime, and popularity data. It will improve pedestrian safety and increase community connection by promoting safe engagement with the outdoors for all Austin citizens.

Audience

01

Austin Students and Young Adults

Students and young adults in Austin can use SafeWalkers to find safer routes when traveling to schools, colleges, workplaces, or social events. The app provides safety scores and community recommendations that help users feel more confident when walking around the city, especially during the evening.

02

Austin Commuters, Walkers, and Cyclists

SafeWalkers is designed for Austin residents who regularly walk, run, or bike throughout the city. Whether commuting to work, exercising, or exploring local neighborhoods, users can find routes that match their needs while considering factors such as lighting, traffic, and community ratings.

03

Austin Communities and Neighborhoods

SafeWalkers benefits Austin communities by encouraging residents to share route information and safety feedback. As more people contribute, the app creates a growing network of trusted local knowledge that helps residents discover safer paths, stay informed, and feel more connected to their neighborhoods.
